RE: Cascade Design Group/ Pete Bambe

To whom it may concern:

I'm a custom home builder in the Corvallis, Oregon area and have been building in this area for the last thirty years.

A key element in the construction of a modern day home is the engineering design. To me a good design needs to solve the engineering questions but there must be some consideration for the bottom line cost to the home owner. Pete and his staff will analyze the whole structure to come up with a cost effective yet professional solution.

On occasion we build homes where the plans are purchased online. The problem is that the pre packaged engineering design has to assume a worst case location. So when we do buy a home plan online we don't buy the engineering package but have Cascade Design Group provide the engineering that best fits the area and conditions in which we are building.

I have entrusted Pete Bambe and his company to provide us with engineering design and needed documentation for the last fifteen years.

Pete thanks for your creativity.....
